

## Chapter 2 – Digestive System

Students will describe the digestion process and organs involved in digestion.

### Section 2.3 and 2.4 – Digestive System

- Draw, color, and label all organs of the digestive system.
- Define digestion and absorption. List and describe the 3 general functions carried out by the digestive system.
- Describe the path food travels throughout the digestive system.
- Define each of the following and explain the roles of each in digestion:
  - Mouth (saliva, enzymes)
  - Esophagus (epiglottis, mucus, peristalsis)
  - Stomach
- Compare the two types of digestion, and describe where each takes place.
- Describe the digestive processes that occur in the small intestine and how other digestive organs are involved:
  - Small intestine
  - Liver/bile
  - Gallbladder
  - Pancreas
  - villus
- Explain the role of the large intestine in digestion using the following terms:
  - Large intestine
  - Rectum
  - Anus
- Include 4 interesting facts related to the digestive system.
- Describe 3 ways the digestive system works with other systems.
