

The Incredible Journey

You are a water molecule. You will be moving through the water cycle as H₂O. When you move as liquid water, you will move in pairs. When you move to the clouds, you will separate from your partner and move alone as individual water molecules. When you leave the clouds, you will take a partner from a cloud and move to the next station. You will line up behind each other, in a single line at a cloud, and rest of the stations you will be in pairs. If you roll STAY, go back to the end of the line at the same station. Record your journey where you travel by writing the name of the station where you move.

Remember:

Move to clouds individually.

Leave a cloud with a partner.

Move through other stations with a partner.
